

Broadband Data Stroll, Version 3

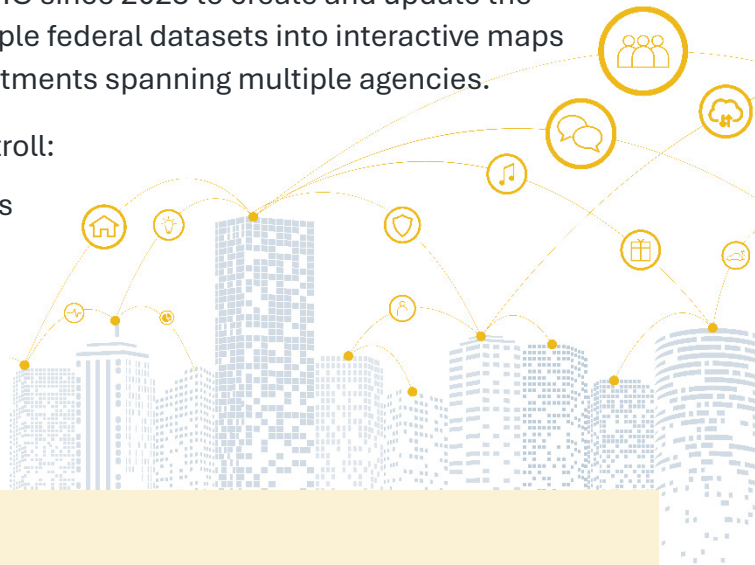

About the Broadband Data Stroll

High-speed internet bolsters our nation's economic growth, technological innovation, and workforce advancement. The federal agencies heavily investing in broadband infrastructure and access are the Departments of Agriculture, Commerce, and Treasury and the Federal Communications Commission.

Commerce OIG has partnered with USDA OIG and FCC OIG since 2023 to create and update the **Broadband Data Stroll**. Updates for 2026 combine multiple federal datasets into interactive maps with tools and filters that let you explore broadband investments spanning multiple agencies.

Along with visualizing broadband deployment, the data stroll:

- Provides transparency into broadband investments
- Raises awareness of federal broadband programs
- Contextualizes our related oversight work regarding broadband programs and stewardship of taxpayer dollars

What's New in the 2026 Release?

- **Improved user experience:** Browse a streamlined layout for easier access to maps and data.
- **Updated awards data:** Stroll through hundreds of millions of data points reflecting more than \$111 billion in federal investments.
- **New map views and tools:** Review changes in broadband availability over time and compare awards across agencies in the same geographic area.
- **Explore by location:** Zero in on broadband serviceable locations across the country as well as areas lacking terrestrial-based service.

Ongoing and Future Oversight Work

Commerce OIG, USDA OIG, and FCC OIG can use the vast amounts of data associated with federal broadband programs to conduct oversight in new and innovative ways.

We will continue internal analysis of federal funding data to help examine overbuilding, funding gaps, and locations with fluctuating broadband availability.

For more information about our oversight of broadband programs, including semiannual reporting on program status, visit the [Commerce OIG website](#).
